Dip-Switch Settings

Taurus Slim Gen 2

Microwave Sensor

On/Off Function (Stand-By Period is 0s)

1) If ambient light is at a sufficient level, the light will remain off even if motion is detected.

2) If ambient light is not sufficient, the light will switch on when motion is detected by the sensor.

3) After hold-time elapses, the sensor will switch off the light if no motion is detected.

Daylight Threshold Set To 'Disabled'

1) If motion is detected, the light will switch on.

2) The sensor keeps the light on for the set hold time after the object leaves the detection area.

3) After hold-time elapses, the sensor will switch the light back off.

Corridor Function

1) If ambient light is at a sufficient level, the light will remain off even if motion is detected.

2) If ambient light is not sufficient, the light will switch on when motion is detected by the sensor.

3) After hold-time elapses, the sensor will switch back to the preset low light level if no motion is detected.

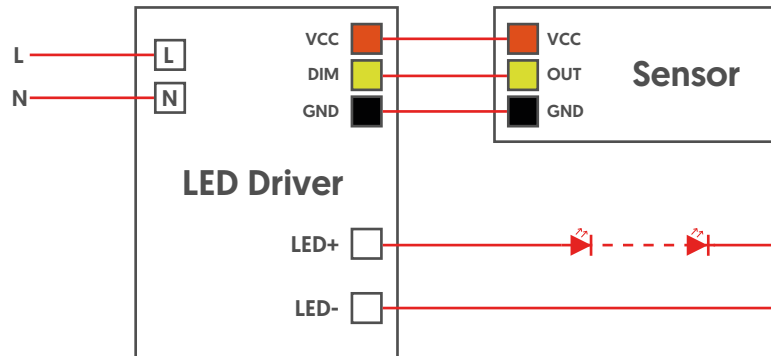

4) After stand-by period elapses, the sensor will switch the light off if no motion is detected.

Wiring Diagram*

Important Notes

- 1) Wiring must be strictly in accordance with the wiring diagram to avoid short circuit.
- 2) Microwaves cannot penetrate metal. Do not place the sensor within an enclosed metal fitting or half-closed metal fitting. Metal or glass (thicker than 20mm) should not cover the sensor, as this will affect performance.
- 3) The sensor should be kept as far away from the driver as possible to avoid interference and unexpected light flashing.
- 4) Vibration signals may be picked up as moving signals, therefore triggering the sensor. Avoid placing the sensor near objects that vibrate regularly, such as metal equipment, pipes, air conditioning outlets, exhaust vents, smoke exhaust machine ports, shaking fans etc.
- 5) The sensor should be kept safe from hazards such as rain or wind (light fitting should have a high IP and IK rating if placed outside).
